SUMMARY

A self-driven JavaScript developer integrates a background in customer service and sales with expertise in programming to deliver quality code and exceptional user interfaces. Strong in creative thinking and analytical problem solving and passionate about building world class web applications.

PROJECTS

WRITE A LETTER

- Allow users to write a letter, spellcheck text, and convert their typed letter to handwriting
- Built with JavaScript, React, Node.js, Express, and CSS
- Integrated Microsoft Spellcheck API and Handwriting.io API through utilizing the Fetch web API
- https://write-letters-byronluk.herokuapp.com/

MOVIE FINDER

- Allowed users to search for movies by name and view further details for each movie
- Built with JavaScript, React, Redux, Node.js, Express, Axios, and CSS
- Coded custom cache to store 20 most recent movies to improve user experience
- https://bl-movie-finder.herokuapp.com/

SAN DIEGO TOP SPOTS

- Deployed list of top 30 spots in San Diego with an interactive map utilizing Google Maps API
- Built with JavaScript, Node.js, Express, and CSS
- Implemented multiple location features through Google: Geolocation, Distance Matrix, Directions Services
- https://sd-top-spots-google-maps.herokuapp.com/
